DETAILED ACTION

1. Claims 1-30 are pending.

Response to Arguments

2. Applicant's arguments filed 21 December 2005 have been fully considered and they are persuasive.

Allowable Subject Matter

3. **Claims 1-30** are allowed.
4. The following is an examiner's statement of reasons for allowance: The present invention is directed towards a system and method for protecting computer device against overload via network attacks. Each independent claim identifies the uniquely distinct features "**classifying session cache entries and determining a class into which a given session of communications traffic falls**". The closest prior art, Jungck et al. (Pub No. 2002/0065938) discloses a method of intercepting and processing packets transmitted from a source to a destination over a network, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious. The closest prior art, Lewis et al. (Pub No. 2003/0110396) discloses a method and apparatus for predicting and preventing network attacks, data is collected from network devices during an attack, fail to anticipate or render the above underlined limitations obvious.
5. Therefore, **claims 1,12, and 25** and the respective **dependent claims 2-11,13-24 and 26-30** are in condition for allowance.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
